Sequence 30879, Application US/09252991A

Patent No. 6551795

GENERAL INFORMATION:
APPLICANT: Marc J. Rubenfield et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS

TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

CURRENT APPLICATION NUMBER: US/09/252,991A

CURRENT FILING DATE: 1999-02-18

PRIOR FILING DATE: 1998-02-18

PRIOR FILING DATE: 1998-02-18

PRIOR FILING DATE: 1998-07-27

NUMBER OF SEQ ID NOS: 33142

SEQ ID NO 30879

LENGTH: 268
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

I. FUNCTION: CATALYZES THE HYDROLYTIC DEHALOGENATION OF SMALL L-2-HALOALKANOIC ACIDS TO YIELD THE CORRESPONDING D-2-HYDROXYALKANOIC ACIDS. ACTIVE WITH 2-HALOGENATED CARBOXYLIC ACIDS AND CONVERTS ONLY THE L-ISOMER OP 2-CHLOROPROPIONIC ACID WITH INVERSION OF CONFIGHRATION TO PRODUCE D-LACTATE. OFTIMAL ACTIVITY SEEN PH 9-15.

J.O. AND MAXIMAL ACTIVITY SEEN AT PH 9-5.

CATALYTIC ACTIVITY: ($)-2-haloacid + H(2)O = (R)-2-hydroxyacid +

I. FUNCTION: THIS PROTEIN FORMS SPIKES ON THE SURFACE OF THE VIRION.
I. IS RESPONSIBLE BOTH FOR THE BINDING OF THE VIRIOS TO SUSCEPTIBLE
HOST CELLS AND FOR INDUCING THE UPTAKE OF THE VIRIOS BY THE CELL.
THE INTERACTION BETWEEN THE INTERNAL COMPONENTS OF THE VIRION AND
THE PORALON OF THE GLYCORROTEIN EXPOSED ON THE CYTOPLASMIC FACE OF
THE PLASMA MEMBRANE PROBABLY DIRECTS ENVELOPMENT AND VIRUS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Сарв

Sauvage C., Franza T., Expert D.;
"Analysis of the Erwinia chrysanthemi ferrichrysobactin receptor gene: resemblance to the Escherichia coli fepA-fes bidirectional promoter region and homology with hydroxamate receptors.";
J. Bacteriol. 178:1227-1231(1996).
-!- FUNCTION: INVOLVED IN THE INITIAL STEP OF IRON UPTAKE BY BINDING CHRYSOBACTIN, AN IRON CHELATIN SIDEROPHORE THAT ALLOWS THE BACTERIA TO EXTRACT IRON FROM THE ENVIRONMENT.
-!- SUBCELLULAR LOCATION: Outer membrane.
-!- SIMILARITY: LOCAL TO OTHER TONB-DEPENDENT RECEPTOR PROTEINS.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                        (without alignments)

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 25. Application US/08927326
Patent No. 6184202
GENERAL INFORMATION:
TITLE OF INVENTION: CELL DEATH REGULATORS
NUMBER OF SEQUENCES: 78
CORRESPONDENCE ADDRESS:
ADDRESSEE: Townsend and Townsend Khourie and Crew
STREET: 379 Lytton Avenue
CITY: Palo Alto
STATE: California
COUNTRY: US
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ZIP: 94301

COMPUTER READABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IEM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Patentin Release #1.0, Version #1.25
CURRAIT APPLICATION DATA:
APPLICATION NUMBER: US/08/927,326
                                   CLASSIPCATION: 435
PRIOR APPLICATION 435
PRIOR APPLICATION NUMBER: US 08/248,819
FILING DATE: 25-MAX-1994
PRIOR APPLICATION NUMBER: US 08/112,208
FILING DATE: 26-AUG-1993
ATPORNEY/AGENT INFORMATION:
NAME: Smith, William M REGISTRATION NUMBER: 15,726A-000620
TELEPRANCE/DOCKET WUMBER:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Mismatches

Sequence 3, Application US/09211640
Patent No. 6020466
GENERAL INFORMATION:
APPLICANT: Craig, Ruth W.
TITLE OF INVENTION: ANTHRODIES WHICH SPECIFICALLY BIND mcl-1
TITLE OF INVENTION: POLYPEPTIDE
NUMBER OF SEQUENCES: 4
CORRESPONDENCE ADDRESS:
ADDRESSEE: Spensley Horn Jubas & Lubitz
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 3, Application US/09378536
